

MAINTENANCE SCHEDULE FOR FASCIA/GUTTER

To help prolong the life of your guttering and ensure it is kept free of debris we recommend clearing and cleaning it every 6 months

1. The most effective, basic and necessary maintenance you should do is cleaning your spouting system thoroughly. We recommend you do this twice a year, once in spring and again in the autumn (more often if you have trees close to the house).
2. Begin by securely placing your ladder so that you can reach the gutters easily. **Do not rest the ladder directly on the gutters, as you will damage them!** You may be interested in gutter attachments that allow you to raise your ladder higher without damaging your gutters.
3. Using rubber gloves, manually clean out any debris that you can reach in the spouting. It is a good idea to throw the debris into a bucket or garbage can directly so that you do not make a mess around your home.
4. Use a hose and spray down the spouting of any small debris. You should see the water flow out cleanly from the downpipe. Wash down the fascia with clean water and a soft-bristle brush or sponge.
5. If you are not comfortable doing it yourself get a professional in. It should be done on a regular basis to meet the terms of your warranty.
